

## Gloves for hairdressers

Dermatitis in hairdressing is very common. It's been proven that almost 70% of hairdressers suffer from dermatitis which if left untreated can also be very painful, but most of hairdressers don't realize that dermatitis is absolutely preventable when wearing the right gloves.

Signs and symptoms of dermatitis include dryness, redness, itching, flaking or scaling, cracking of the skin or even blistering.

The different hairdresser's applications can be divided into:

- Shampooing and rinsing

For these applications, that include necessitating an abundance of water, Ansell recommends the usage of latex household gloves – with chlorination treatment to reduce the latex proteins content:

Profil™ +	87-850
Universal™ +	87-650, 87-665
Duzmor® +	87-600

- Coloration, Permanent

These applications require more dexterity. Ansell recommends powder free gloves.
